

The MacMini is a 2014 model with PCIe storage and soldered RAM. The machine has been modified with the power supply removed and an UpTone Audio MMK DC / Fan conversion has been done.

The DAC and Amp are connected with balanced cables.

This is the core system as wired before testing of the interface between the computer and the DAC to improve audio quality. There will also be changes to the networking system that the computer uses. To start with the computer will use a wired network connection that is electrically isolated
