

Focal completes its high-fidelity headphones Collection with an audiophile DAC & amplifier

In less than three years, Focal has established itself as a key player in the high-end headphones market. The manufacturer continues to develop ultra-high-performance solutions and unveils today Arche, a unique audiophile DAC and amplifier. Ideal to sit between the digital sources and your headphones, Arche is the perfect solution to fully enjoy your music.

AN ALL-IN-ONE SOLUTION FOR HEADPHONES

Arche is a unique electronic solution developed by Micromega (who brought its expertise in the world of high-end electronics) for Focal. Thanks to the digital-analog converter and the amplification modes it integrates, Arche strongly increases the performance of high-fidelity headphones and can also drive a home hi-fi system.

The cherry on the cake, Focal has also built in solutions dedicated to each of its headphones - Utopia, Stellia, Clear, Elear & Elegia - via presets. Owners of Focal headphones can therefore be sure they are enjoying a combination of electronics and acoustics that is carefully thought out and specially developed from the very outset. Arche will be updated by downloading new firmware onto a USB stick and inserting it into the USB port at the back of the product to automatically

upload it. Every user gets amplification to suit their headphones and their favourite tonal balance whilst benefiting from the performance delivered by the converter to drive high-fidelity loudspeakers.

THE ULTIMATE IN HIGH-FIDELITY

With Arche, Focal provides an ultra-high-standard ecosystem in the headphones and associated electronics world. Building on 40 years of expertise in High-Fidelity, the brand innovates ever more in technologies but also with its products by making no compromise on performance, uses and aesthetics. Arche comes with a solid aluminium headphones mount inspired by the brand's logo: accessing and storing the headphones is therefore quick and easy, as well as looking incredible and saving on space!

Availability: March 2019
